

Discover[®] MIXTECH^{EMX}

THE MOST SIGNIFICANT IMPROVEMENT IN A BATTERY IN 50 YEARS.

MIXTECH - 360° Acid Mixing Technology

- Eliminates acid stratification
- Minimizes sulphation preventing premature capacity loss
- Ensures uniform material utilization guaranteeing longer high performance life
- Maintains Dynamic Charge Acceptance essential for highly equipped vehicles with intense driving schedules
- Delivers longer battery life in extreme temperatures

Expanded Negative Grids increase tensile strength of active material bonds

Increased Negative Active Material density for improved life

Fiber-lock Scrim, embedded into the active material on each side of the + and - plates, increases active material bonds and reduces material erosion.

Envelope (-) Separators reduce internal resistance and short circuits

High purity Calcium Alloy Expanded Positive Grids increase tensile strength of active material bonds, resist corrosion, and minimize water loss

Increased Positive Active Material density and additives increase active material to grid bonds, reduce internal resistance, promote high cranking power and increase performance and life

Element Bonding provides vibration resistance and helps to resist positive plate growth

Reinforced Polypropylene Case utilizes completely sealed cover for true maintenance free performance

Integrated carry handles

Central Degassing manifold with integrated flame arrestors collect and discharge gas away from terminals improving safety and reducing terminal corrosion. Gases travel through a spider-web like maze within the manifold trapping the water & electrolyte vapors re-combining them back into the battery preventing premature dry out.

3/8" stainless stud or cold forged SAE terminals
